NAVAERO ANNOUNCES NEW EASA STC ON EMBRAER 135

SUNDSVALL, SWEDEN - 18 February, 2010 - navAero announced today that its t•Bag™C2² EFB system has been awarded an EASA Supplementary Type Certificate for the Embraer E135BJ “Legacy”.

STC Number 10027700 was granted to navAero partner ABS Jets through Aero Vodochody, a Prague-based DOA, that is part of an on-going strategic relationship between navAero and ABS Jets, an executive jets operator based in Prague.

ABS Jets selected the navAero EFB for their avionic upgrade plan, and is one of the first European business jet operators to implement EFB technology for increased reliability and enhanced situational awareness. The implementation of a Class 2 EFB platform gives operators the ability to utilize software applications to better manage the aircraft’s operational performance as well as providing a way to implement enhanced situational awareness tools. The navAero EFB system will also be used by ABS Jets as a document viewer as an alternative to carrying the paper manuals that are required for each flight operation. ABS Jets has also started to use Airport Moving Map capability with own-ship position shown.

“We selected navAero as the right partner for our EFB project because of their quality and reliability, and the state-of-the-art technology of their EFB system which will allow us to realize a multiplicity of enhancements in our flight operations.” states Daniel Holda, Technical Director of ABS Jets.

“Applications like charting and airport moving map enhance our safety-of-flight operations. And in the future, the deployment of the wireless capability will create an extremely independent way for us to have on-the-ground connectivity that is separate and apart from the airport infrastructure. This connectivity will give our pilots a way to perform their briefings and pre-flight tasks from right from the cockpit. And it will also give our crews the additional capability of being able to implement last minute changes...all without leaving the flight deck.”

“The commitment of ABS Jets to navAero’s EFB solutions is a strong proof point as to the capabilities and range of services that our company is delivering today to the commercial aviation marketplace.” said navAero spokesperson Simone Giordano. “We are proud of the achievement and professional work that has been executed by ABS Jets and Aero Vodochody, and we look forward to increasing our collaboration with both of these organizations.”

ABS Jets and navAero can provide a complete package of service for the E135 aircraft, including the EFB installation performed by the MRO division of ABS Jets in Prague.

About navAero 

navAero is the leader in developing and commercializing cost effective electronic flight bag products for the airline industry. navAero AB is headquartered in Sundsvall, Sweden. For further information, visit the navAero website at www.navaero.com or e-mail us at info@navaero.com.

About ABS Jets 

With over 150 employees and international awards ABS Jets is one of few companies in Central Europe, which can meet all needs of a demanding business jet customer, on ground as well as in the air. For further information, visit the ABS Jets website at www.absjets.com
